Scope of Work – Sprinkler System for Solar Module Cleaning

Default Inclusions in Supply

1. Piping – Entire uPVC piping from water source till various delivery points at solar modules
2. Pumping System – The water pump as per design, water filtration unit and Pump starter.
3. Smart Controller – The smart controller as per the required design to undertake automatic starting, sequencing and stopping of the sprinkler system at defined time of a day.
4. Sprinklers with Saddles

Scope of Work

5. Inspection of site and designing Sprinkler System to offer required results
6. Supply & Installation of uPVC piping from water resource till delivery points at Solar Modules
7. Supply and Installation of water pump, filtration unit and pump starter
8. Supply and Installation of Sprinklers on all the solar modules (2 Sprinklers per one module)
9. Supply and Installation and configuration of smart controller for starting cleaning cycle as per customer requirement
10. Training to customer for the operations
11. 1 Year Warranty
